ComsignTrust Desktop software

The ComsignTrust Desktop software is a desktop signature software that expands the use of Comsign's electronic signature and enables a digital signature on original documents directly from the user's workstation.

This software replaces the company seal or the manual signature for all documents, such as **invoices, price proposals, purchase proposals, contracts, payment orders for the bank, scanned documents, engineering drawings and any other document that requires a signature.**

The software enables to sign a wide range of file types and documents, such as **PDF, Word, Excel, Tiff**, as well as sign all files in one library at once. In addition, the software allows automatic email delivery of the digitally signed files.

Green — Digital signature on all types of documents in your organization

Efficient — Sign all files in a library at once

Fast — Send the digitally signed files via email
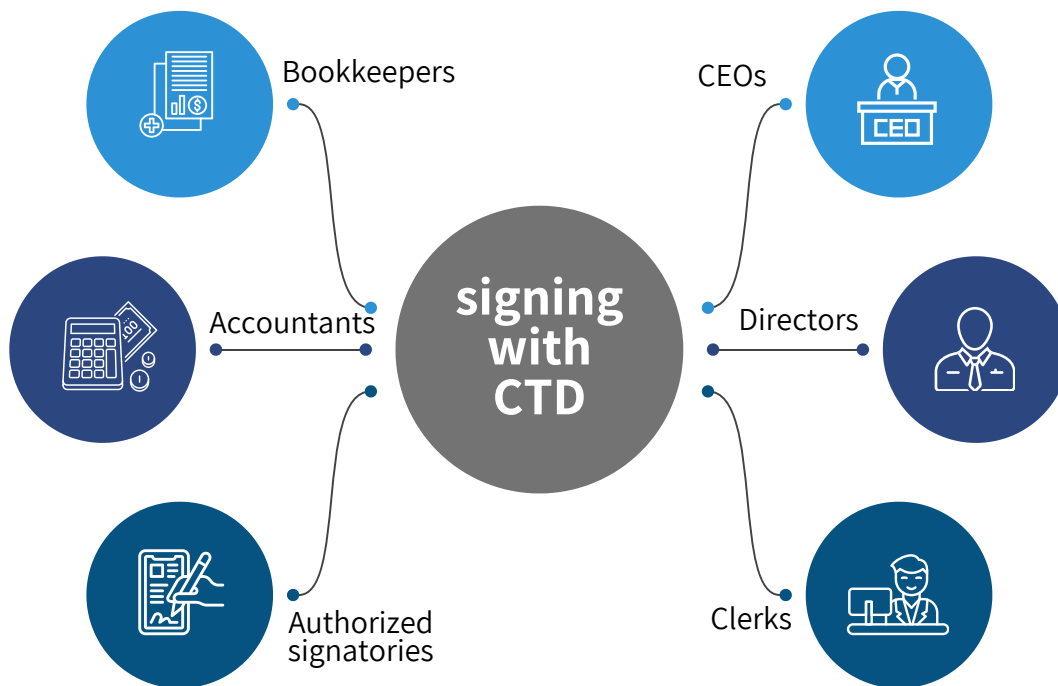

Flexible — Integration with other apps

Secure — Full control and supervision over all signed documents within the organization.

Who is the target audience for the CTD software?

The product is suitable for any organization that requires signatures, whether it's just a few per month or up to 1,000 signatures every month. It caters to:

- Organizations needing automated signatures
